

**JSC «Kazakh-British Technical University»  
School of IT and Engineering**

**APPROVED BY  
Dean of SITE**

« \_\_\_\_ » \_\_\_\_ 20 \_\_\_\_.

## **SYLLABUS**

**Discipline: Web Development**

**Number of credits: 4**

**Term: Spring 20\_\_**

**Instructors: Bobur Mukhsimbayev, Aibek Kuralbayev**

<b>Personal Information about the Instructor</b>	<b>Time and place of classes</b>		<b>Contact information</b>
	<b>Classes</b>	<b>Office Hours</b>	<b>e-mail</b>
Bobur Mukhsimbayev	According to the schedule	Room 184, will be appointed	b.mukhsimbaev@kbtu.kz
Aibek Kuralbayev	According to the schedule	Room 184, will be appointed	a.kuralbaev@kbtu.kz

**COURSE DURATION:** 4 credits, 15 weeks

### **COURSE DESCRIPTION**

This course provides a practical introduction to modern web development using Angular for the client side and Django for the server side. Angular is a platform and framework for building single-page client applications using HTML and TypeScript. Django is a high-level Python web framework that promotes rapid development and clean, pragmatic design.

Through hands-on projects and lab assignments, students will gain experience building full-stack web applications. The course focuses on the practical use of Angular and Django in solving real-world problems, with an emphasis on code quality, scalability, and industry best practices.

### **COURSE OBJECTIVES**

- Equip students with skills to design and implement full-stack web applications using Angular and Django.
- Provide experience in solving industry-inspired problems using modern frameworks and tools.
- Foster collaboration and teamwork in software development through project-based learning.
- Reinforce foundational knowledge of web technologies including HTML, CSS, JavaScript, and RESTful API development.

## COURSE OUTCOMES

Upon successful completion of the course, students will be able to:

- Demonstrate proficiency in HTML5, CSS3, and JavaScript fundamentals.
- Work with Node Package Manager (npm) to manage Angular dependencies.
- Build and structure Angular applications using components, modules, services, interfaces, and routing.
- Understand and use both JavaScript and TypeScript effectively.
- Apply intermediate-level Python programming skills in web development.
- Understand web architecture and the HTTP request/response lifecycle.
- Develop and deploy Django applications using models, views, templates, and REST APIs.
- Set up a local development environment including virtual environments and development servers.
- Use Django REST Framework to build secure, self-documenting RESTful APIs with serialization and authentication.
- Integrate Angular front-end applications with Django back-end APIs.
- Apply industry best practices for web application development and testing.

## COURSE POST REQUISITES

This course provides foundational skills for several development tracks:

- **Frontend Track** – Advanced Angular, UI design, and state management
- **Backend Track** – Django, REST APIs, databases, and deployment
- **Mobile Development Track** – API integration with Flutter or React Native
- **UX/UI Track** – Structure and interaction design for web interfaces
- **Full-Stack Pathway** – Combined client-side and server-side development

## LITERATURE

1. *You Don't Know JS (2nd Edition)* – A deep dive into JavaScript concepts:
  - <https://github.com/getify/You-Dont-Know-JS/blob/2nd-ed/README.md>
2. *Eloquent JavaScript* – A modern introduction to JavaScript:
  - <https://eloquentjavascript.net/>
3. *Developer Roadmap* – Guides and visual paths for developers:
  - <https://github.com/kamranahmedse/developer-roadmap>
4. *W3Schools – HTML Tutorial* – Reference for HTML elements and usage:
  - <https://www.w3schools.com/html/>
5. *Airbnb CSS Style Guide* – Best practices and standards for writing CSS:
  - <https://github.com/airbnb/css>
6. *Angular Official Documentation* – Learn and build with Angular:
  - <https://angular.dev/>
7. *PEP 8 – Python Style Guide* – Conventions for Python code:
  - <https://peps.python.org/pep-0008/>
8. *LearnPython.org* – Interactive Python tutorials:
  - <https://www.learnpython.org/>
9. *Django Documentation* – Official Django framework docs:
  - <https://docs.djangoproject.com/>
10. *Django REST Framework* – Build REST APIs with Django:
  - <https://www.django-rest-framework.org/>
11. *Django Girls Tutorial* – Beginner-friendly Django project tutorial:
  - <https://tutorial.djangogirls.org/en/>

Week	Classwork		Laboratory works
	Topic	Lecture	
1	<b>Introduction to Web Development:</b> <ul style="list-style-type: none"> <li>What is the website?</li> <li>How does the Web work?</li> <li>Client-side vs. Server-side technologies</li> <li>Framework &amp; Library</li> <li>Back-End framework comparison</li> <li>Basic techniques for scaling</li> <li>What is the API?</li> </ul>	1	1. Laboratory work #1
2	<b>Web development roadmap</b> <ul style="list-style-type: none"> <li>Web development roadmap</li> <li>HTML Elements and Attributes</li> <li>HTML Forms Inputs</li> <li>Introduction to CSS</li> <li>HTML5/CSS3 features</li> </ul>	2	1. Laboratory work #2
3	<b>JavaScript</b> <ul style="list-style-type: none"> <li>JavaScript Basics</li> <li>JavaScript Standards (ES6+)</li> <li>Data Types and Variable Scoping</li> <li>Functional Programming Concepts</li> <li>Working with JSON</li> <li>DOM Manipulation</li> <li>Event Handling</li> <li>HTML Element Manipulation</li> </ul>	3	1. Laboratory work #3
4	<b>Introduction to Angular.</b> <ul style="list-style-type: none"> <li>Introduction to Angular</li> <li>Goals and Architecture of Angular</li> <li>Angular CLI usage</li> <li>JavaScript vs. TypeScript basics</li> </ul>	4	1. Laboratory work #4 2. Quiz 1
5	<b>Angular Components</b> <ul style="list-style-type: none"> <li>Component Properties</li> <li>Data Binding</li> <li>Templates and Styles</li> <li>Life-cycle Hooks</li> </ul>	5	1. Laboratory work #5
6	<b>Angular Modules and Router</b> <ul style="list-style-type: none"> <li>Working with RESTful APIs</li> <li>Reactive Programming Concepts</li> <li>Angular Services</li> <li>Observables in Angular</li> </ul>	6	1. Laboratory work #6
7	<b>Introduction to Python:</b> <ul style="list-style-type: none"> <li>Python syntax, data types</li> <li>Sequence containers</li> <li>Functions, modules</li> <li>Object-Oriented Programming, classes, functions</li> </ul>		1. Laboratory work #7
8	<i>Lecturers will proctor on practice lesson</i>		<b>Quiz 2 - aka Midterm</b>
9	<b>Introduction to Django:</b> <ul style="list-style-type: none"> <li>What is Django?</li> </ul>	9	1. Laboratory work #8 2. Project

	<ul style="list-style-type: none"> <li>• Project structure (settings.py, urls.py, wsgi.py)</li> <li>• Django REST Framework</li> <li>• Building REST APIs With Django REST Framework</li> </ul>		
10	<b>Django Models &amp; ORM</b> <ul style="list-style-type: none"> <li>• Django models</li> <li>• Fields, relationships (ForeignKey, OneToOne, ManyToMany)</li> <li>• Migrations (makemigrations, migrate)</li> <li>• Admin registration</li> <li>• Basic ORM queries (filter, get, create)</li> </ul>	10	1. Laboratory work #9 2. Project
11	<b>Building API Views (CRUD):</b> <ul style="list-style-type: none"> <li>• DRF View types: <ul style="list-style-type: none"> <li>◦ Function-Based Views (FBV)</li> <li>◦ Class-Based Views (CBV)</li> </ul> </li> <li>• URL routing for API</li> <li>• Testing endpoints with Postman</li> <li>• HTTP methods (GET, POST, PUT, DELETE)</li> <li>• Response objects</li> </ul>	11	1. Laboratory work #10 2. Project
12	<b>DRF Serializers and User Authentication &amp; Permissions:</b> <ul style="list-style-type: none"> <li>• Creating a Serializer class</li> <li>• Working with Serializers</li> <li>• Types of Serializer Classes</li> <li>• Simple Serializer class</li> <li>• ModelSerializers</li> <li>• Users and Authentication</li> <li>• Django User model</li> <li>• Login / Register endpoints</li> <li>• DRF authentication</li> </ul>	12	1. Laboratory work #10 - defense
13	<b>Fully working Django REST API:</b> <ul style="list-style-type: none"> <li>• Full API testing (with Postman and Angular frontend)</li> <li>• CORS</li> <li>• Selecting Objects <ul style="list-style-type: none"> <li>◦ Filtering</li> <li>◦ Ordering</li> <li>◦ Slicing</li> </ul> </li> </ul>	13	1. Project defense preparation
14	<b>AI-Assisted Development</b> <ul style="list-style-type: none"> <li>• Large Language Models trained to generate and understand code</li> <li>• AI Coding Assistants <ul style="list-style-type: none"> <li>◦ GitHub Copilot</li> <li>◦ ChatGPT</li> <li>◦ Claude</li> <li>◦ ...</li> </ul> </li> </ul>		<b>Quiz 3 - Project defense</b>

	<ul style="list-style-type: none"> <li>Ethical &amp; Practical Considerations: <ul style="list-style-type: none"> <li>When and how to trust AI-generated code</li> <li>Avoiding plagiarism and over-reliance</li> <li>Reviewing, testing, and understanding AI outputs</li> </ul> </li> </ul>		
15	<i>Lecturers will proctor on practice lesson</i>		<i>Quiz 4 - aka Endterm</i>
16-17	Final Exam		

### COURSE ASSESSMENT PARAMETERS

Type of Activity	Final scores
Quiz 1	5%
Quiz 2: aka Midterm	15%
Quiz 3: Project defense	10%
Quiz 4: aka Endterm	20%
Lab defense	10%
Final exam	40%
<b>Total</b>	<b>100%</b>

### Criteria for evaluation of students during the semester:

	Assessment criteria	Weeks																Total scores
		1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	
1	Quiz 1				*													5%
2	Quiz 2								*									15%
2	Quiz 3														*			10%
3	Quiz 4															*		20%
4	Lab works	*	*	*	*	*	*	*	*	*	*	*	*					10%
5																		
6	Final exam																*	40%
	<b>Total</b>																	<b>100%</b>

### Academic Policy

The course follows the standard KBTU academic policy. All students are expected to uphold the highest standards of academic integrity and professional conduct.

- **Academic Integrity:**

Cheating, duplication, data falsification, plagiarism, or the use of unauthorized materials is strictly prohibited. Any violation will result in disciplinary action according to university regulations.

- **Use of AI Tools:**

Students are allowed to use AI-based tools (e.g., ChatGPT, GitHub Copilot, other AI assistants) outside the classroom for:

- Learning and understanding course topics
- Exploring examples and explanations
- Assisting with practice and homework

The use of AI tools is strictly prohibited during **quizzes, exams, laboratory defenses**, and any **graded in-class assessments**. Any misuse of AI during assessments will be treated as academic misconduct.

- **Attendance:**

Attendance is **mandatory**. Students who miss more than **30%** of classes will receive an automatic **F (Fail)** grade for the course.

Merely attending class does not constitute participation. Students are expected to come prepared, engage actively in discussions.

- **Class Participation:**

Participation includes:

- Reading assigned materials in advance
- Engaging in class discussions
- Asking relevant questions
- Demonstrating consistent effort in labs and projects

- **Communication:**

**MS Teams** is the primary platform for announcements, communication, and file sharing.

Students must **check MS Teams channels of the course and messages daily** and respond promptly when needed.

- **Assignments and Deadlines:**

All written work must be typed or clearly handwritten and submitted by the specified deadline.

**Late submissions are not accepted.**

- **Punctuality:**

Students must arrive on time. Repeated lateness will be treated as absenteeism.

- **Missed Work and Make-Up Tests:**

Students are responsible for catching up on any missed work.

**Make-up tests are not guaranteed** and will only be considered in exceptional cases, subject to instructor approval.

- **Classroom Etiquette:**

- Mobile phones must be **switched off or silenced** during class.
- Respectful and professional behavior toward instructors and peers is required at all times.
